**CENTRAL DUPLICATING MOVES...**Central Duplicating will be relocating its office and production facilities to the Planning Building within the next few weeks. The tentative (3-day) move is scheduled for Aug. 11-13.

All Duplicating and Printing Services will be cut back on Monday, Aug. 11, suspended entirely Tuesday, Aug. 12, and partial service resumed Wednesday, Aug. 13. Full production facilities will be operational on Thursday, Aug. 14.

We urge all Units to plan their printing and duplicating requirements with this schedule in mind. To facilitate handling of reproduction requests, Central Duplicating will be providing all Units with special, one-way envelopes (yellow with red printing). Simply complete your Job Request form in the usual manner, attach originals and enclose in envelope, then place at your Unit's mail pick-up location. The envelopes will be delivered directly to Central Duplicating for immediate processing. Delivery of completed work will be accomplished by the B&PO distribution system which currently delivers Central Stores orders.

Additional supplies of special envelopes and job request forms are always available by calling Central Duplicating at ext. 2191/2192.

Rates are based on income. For full information on its services and facilities, contact Steven Heller at 534-5980 or Student Services, ext. 2141.

## OBSERVATIONS ON LISTENING TECHNIQUES

1. A non-listener is characterized by an absence of physical movement and an eye link rate of less than once every three to five seconds.

2. Individuals who are listening in an adult mode (Adult in the TA sense of the word which means rational nonemotional dealing with reality) have a physically squared-up, level head posture over 90% of the time vs. tilting, angled to either left, forward or backwards posture.

3. Listening should be differentiated from hearing. Hearing is a semi-automatic auditory environment scanning operation

which can be repeated back to others in a mechanical fashion with essentially no personal involvement by the individuals.

4. Repetitious, non-audible activities such as silent head nodding in response to speech by another will be experienced as deprivation by the talker.

5. Several useful techniques for helping individuals modify their present listening responses are: A. Offer a one or two-syllable response at least once every 20 seconds. This helps break up the getting all wound up with talker monologues and the feeling of being left out by the listener and resolves the "I can't think of anything to say" type of problem. B. For those who complain

about "I can't talk with others," "no one talks to me,"

"I lose track of what people are saying," the prescription is get a move on, i.e., blink, shift around, let oneself be "moved" by the speaker. C. For those who want to feel more in touch to what is going on and in control of themselves, gently rubbing ones teeth back and forth over each other has an interesting psychological effect when practiced for 20 or 30 seconds at a time several times a day or in moments of stress for a few seconds at a time. D. If, as the listener, your emotions are overriding problem solving, the "Get Level With" described above will be useful to get to your Adult (TA wise).
